

Every vehicle. Every journey. One clear view.

Know what is available, who is driving and what needs attention. Bring your fleet's daily work together, from the first booking to the next service.

Vehicle availability

Bookings and journeys

Maintenance history

Keep the essentials in motion.

Nebulas Fleet is cloud software for managing vehicles, bookings, journeys and maintenance. It gives teams a shared operational record, checks conflicting reservations and keeps vehicle history within the right company workspace.

01

One vehicle register

Keep vehicle details, status and history together. Search and filter a mixed fleet of cars, vans, ambulances, motorcycles or trucks.

02

Book with a clearer plan

Reserve a vehicle and driver for a time interval and purpose. Fleet checks overlapping vehicle and driver reservations before accepting the booking.

03

Follow each journey

Start a planned journey, record the return and retain its history. Odometer checks help keep distance records consistent.

04

Make room for maintenance

Schedule workshop visits, complete or cancel jobs and keep a service history. Scheduled maintenance blocks conflicting vehicle reservations.

05

Fit the operational workflow

Discuss crew, outing, equipment and document workflows during setup. Activate the relevant operational features around your team's responsibilities.

06

Keep access in context

Use central Nebulas sign-in and company workspaces. Reading and editing depend on the permissions assigned to the selected workspace.

Let the work connect.

Coordinate Fleet with your wider business processes. ERP context and Calendar, Projects or Customer Files connections depend on the modules, permissions and integrations configured for your workspace. We agree the exact scope with you before rollout.

From a request to a recorded return.

01

Plan the work

Find a suitable available vehicle and record the driver, purpose and booking interval.

02

Manage the journey

Start the reservation when it is due.
Keep the team working from the same operational record.

03

Close the loop

Record the return and odometer reading. Keep the journey and maintenance history ready for the next decision.

Different vehicles. A shared way to work.

01

Company and pool fleets

Coordinate shared cars and vans across teams, departments and daily assignments.

02

Service and field teams

Plan vehicle use around visits and service work, with workshop time in the same availability picture.

03

Transport and ambulance teams

Build a scoped operational setup for vehicles, outings and crews, with responsibilities agreed during onboarding.

Give your fleet a clearer next move.

How are overlapping bookings handled?

Fleet checks the requested interval against existing reservations for the vehicle and driver. Scheduled workshop visits also block overlapping vehicle bookings. Unavailable or retired vehicles cannot receive new reservations.

Does Fleet include live GPS tracking?

Live GPS tracking and telematics are not included in the capabilities presented here. If you need location, driving-hours or specialist device integrations, we assess those requirements separately.

How much does Nebulas Fleet cost?

Fleet is offered by consultation. We agree the vehicles, users, workflows, integrations, onboarding and support before providing a quote. There is no public fixed-price or self-service purchase on this page.

How do we get started?

Tell us about your fleet and the process you want to improve. We define a practical initial scope, configure the company workspace and access, and agree the rollout. Existing customers can use Open Fleet once their workspace is enabled.

Bring your vehicles, people and daily constraints. We will help define the right starting point.
