NEBULAS

NEBULAS FLEET · FLEET OPERATIONS

# Every vehicle. Every journey. One clear view.

Know what is available, who is driving and what needs attention. Bring your fleet's daily work together, from the first booking to the next service.

### One vehicle register

Keep vehicle details, status and history together. Search and filter a mixed fleet of cars, vans, ambulances, motorcycles or trucks.

### Book with a clearer plan

Reserve a vehicle and driver for a time interval and purpose. Fleet checks overlapping vehicle and driver reservations before accepting the booking.

### Follow each journey

Start a planned journey, record the return and retain its history. Odometer checks help keep distance records consistent.

### Make room for maintenance

Schedule workshop visits, complete or cancel jobs and keep a service history. Scheduled maintenance blocks conflicting vehicle reservations.

### Fit the operational workflow

Discuss crew, outing, equipment and document workflows during setup. Activate the relevant operational features around your team's responsibilities.

### Keep access in context

Use central Nebulas sign-in and company workspaces. Reading and editing depend on the permissions assigned to the selected workspace.

### Let the work connect.

Coordinate Fleet with your wider business processes. ERP context and Calendar, Projects or Customer Files connections depend on the modules, permissions and integrations configured for your workspace. We agree the exact scope with you before rollout.
